

Technical Data Sheet

## Trionol™ 7 A Alkyd for Enhancing Ink Film Integrity

### IMPORTANT CHARACTERISTICS:

Trionol™ 7 A is a Lawter™ specialty alkyd. When printed on coated paper, a Trionol 7 A based ink partially penetrates and oxidizes, providing a tough anchor. The remainder of the Trionol 7 A remains on the surface as a film-forming coating that rapidly hardens to a tough, rub-resistant print.

Trionol 7 A, with exceptionally good pigment wetting properties, can improve gloss, setting speed and rub resistance, in contrast with many pigment-wetting vehicles that detract from gloss and setting speed.

The use of driers, resinates or reactive metals on pigment surfaces will gel Trionol 7 A. The increase in viscosity caused by the use of metallic driers can be modified by the addition of one-fourth the drier weight of an anti-skinning agent. The viscosity of Trionol 7 A is stable in finished inks. Trionol 7 A can replace drying oils in quickset and heatset vehicles to improve compatibility, solvent tolerance, pigment wetting, and rub resistance without sacrificing setting speed.

### APPLICATIONS:

- Sheetfed offset
- Coldset offset
- Heatset offset
- Letterpress
- Metal deco

### BENEFITS:

- Excellent wetting
- Improvement for high rub resistance
- Improves transfer
- Faster cure than conventional alkyds
- Replaces drying oils in quickset and heatset vehicles

### Typical Properties

Property	Value	Test Method / Standard
Viscosity:	240 sec.	GH Bubble Tube @ 100°F, E:E Method BAX-QC-106
% Non-Volatile:	100	Method BAX-QC-195
Acid Value:	8	Method BAX-QC-102
Color:	5	Gardner Color Method BAX-QC-103
Weight/Gallon:	8.6 lbs	Method BAX-QC-130
